

The below document details the Knowledge Graph application for an ESG Analyst.

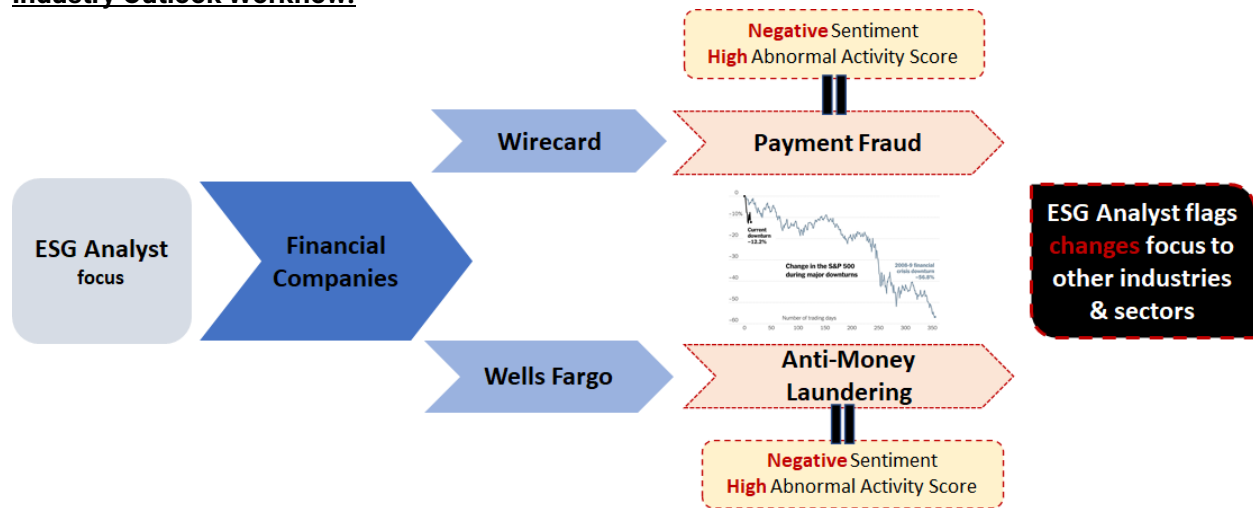

**Target Persona / Process & Identifying Pain Points**

**Target Persona:** ESG Analyst

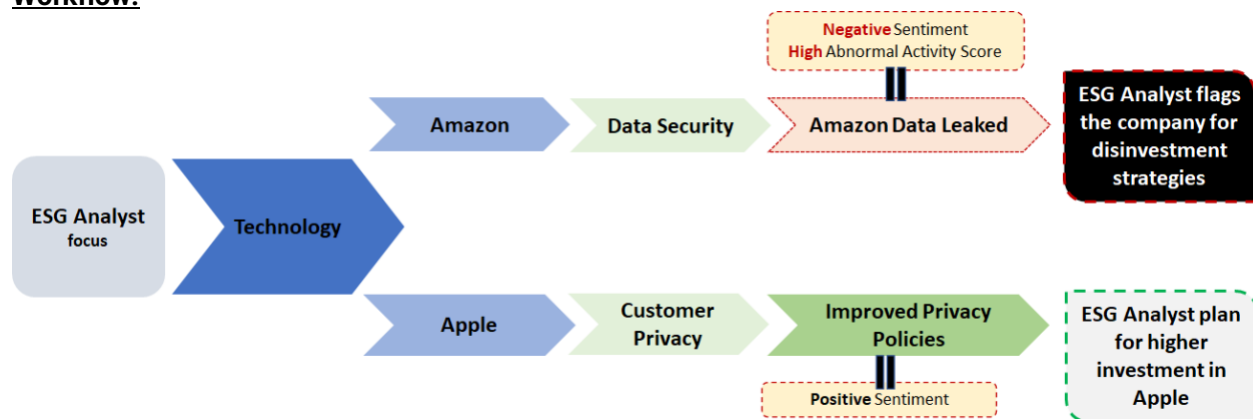

**Industry:** Asset Management

Industry Outlook	In-depth Company Details	Comparisons between Companies
<p>ESG analysts look at the <b>"big picture"</b> for an investment idea or selection of stocks.</p> <p>Our KG would help ESG Analysts to view companies on a <b>high-level industry</b> and <b>sector</b> basis.</p> <p>KG could help in finding industry leaders using sector-specific filters based on regions, sectors, events, abnormality or sentiments to better understand the industry.</p>	<p>Using the KG, an ESG analyst would be given the ability to quickly identify and analyze <b>significant events</b> for a company in any given time and invest accordingly.</p> <p>The KG would act as a <b>one-stop summary visualization</b> to show the events with positive or negative sentiment related to a company.</p> <p>KG can help in performing <b>root-cause analysis</b> for specific changes in a company's ESG performance</p>	<p>The KG can be utilized to <b>compare</b> multiple companies on the basis of common events or regions.</p> <p>A company's stocks can be identified as profitable from <b>a company's ESG trends</b> and aid in making a final investment decision.</p>  <pre>graph TD; DS[Data Security] --- Apple; Americas --- Apple; Americas --- Amazon; Technology --- Apple; Technology --- Amazon; Amazon --- Americas; Amazon --- CP[Customer Privacy]; Amazon --- ADL[AmazonDataLeaked]; Amazon --- CNN;</pre>

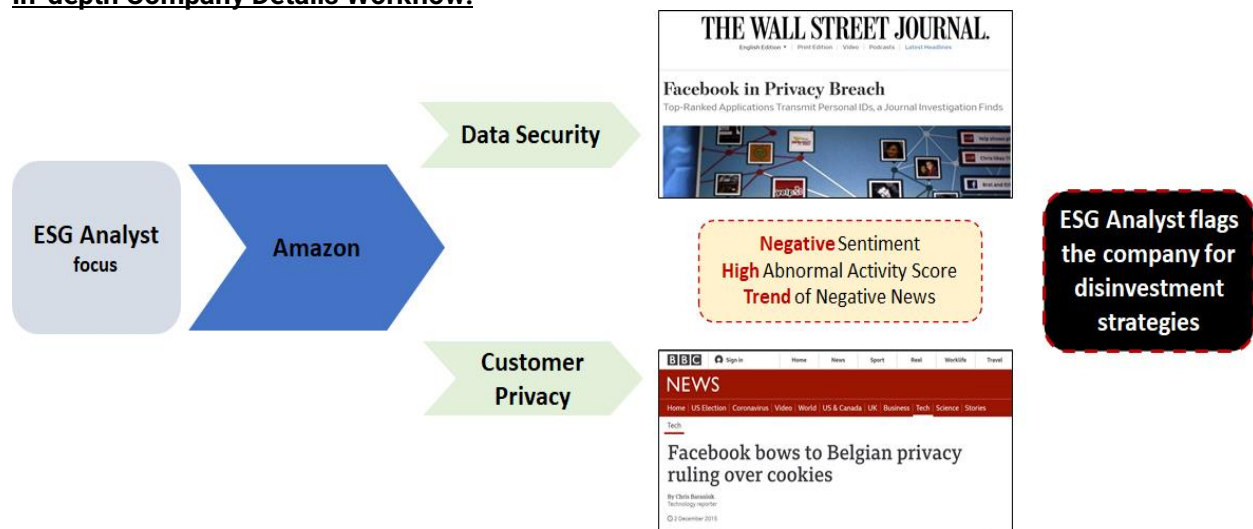

## Industry Outlook Workflow:

## Comparisons between Companies Workflow:

## In-depth Company Details Workflow:

## As-Is Scenario & Mapping to the Pain Points

Pain Points	“As Is” Scenario
Questionable Data Reliability	<ul style="list-style-type: none"> <li>• Too much of the available ESG information is of <b>poor quality</b>;</li> <li>• Suboptimal <b>timeliness</b>;</li> <li>• Mixed &amp; unassessed <b>relevance</b>.</li> </ul>
Lack of Scoring Rubrics	<ul style="list-style-type: none"> <li>• Include but are not limited to judgments concerning degrees of positivity/ negativity/ relevance, presence of neutrality etc.</li> </ul>
Tunnel Vision	<ul style="list-style-type: none"> <li>• Missed opportunities for failing to grasp the “bigger picture” when analyst is hyper focused on specifics</li> <li>• E.g. data privacy issue in Amazon vs. technology industry</li> </ul>
Missed Relationships	<ul style="list-style-type: none"> <li>• Caused by <b>insufficient analyses</b>;</li> <li>• E.g. hard to see indirect relationships between non-adjacent items in tables <ul style="list-style-type: none"> <li>◦ &lt;CNN, Wrote, AmazonDataLeaked&gt;</li> <li>◦ &lt;AmazonDataLeaked, DocumentAbout,Amazon&gt;</li> </ul> </li> </ul>
Inefficient Workflow	<ul style="list-style-type: none"> <li>• “Data swamp”</li> <li>• Unintuitive and difficult to navigate when comparisons are not straightforward and data management is bad</li> </ul>
Low Reusability & Scalability	<ul style="list-style-type: none"> <li>• EDA done for specific projects might be subject to ‘one time only’ and is hard to scale</li> </ul>
Low Explain-ability	<ul style="list-style-type: none"> <li>• Difficult to explain to (non-tech) third party (e.g. shareholders)</li> </ul>

## To-Be Scenario & Addressing the Pain Points

Pain Points	"To Be" Scenario
Lack of Scoring Rubrics	<ul style="list-style-type: none"><li>With the sentiment and relevance score acting as a numeric indicator, it's easier for the analyst to comprehend the characteristics of the nodes relationship</li></ul>
Tunnel Vision & Missed opportunities	<ul style="list-style-type: none"><li><b>Polymorphic characteristics of KG allows:</b><ul style="list-style-type: none"><li>Efficiently finding data interlinks between nodes</li><li>Ability to see relationships from top-down level, seeing the big picture</li><li>Navigating intuitively across concepts, relationships, and fields</li></ul></li><li><b>Filters:</b> the feature allows the users to analyze the Knowledge Graph from multiple views, depending on their priorities and needs</li></ul> <p><u>Primary:</u></p> <ul style="list-style-type: none"><li>By industry/sector</li><li>By event/group</li><li>By entity name</li><li>By region</li><li>By entity type</li></ul> <p><u>Secondary:</u> relevance and sentiment range</p>
Inefficient Workflow	<ul style="list-style-type: none"><li>Quickly extract insights and easily share among stakeholders</li><li>Improve decision-making process and workflow's speed and accuracy with the straightforward relationship between nodes</li></ul>
Low Reusability & Scalability	<ul style="list-style-type: none"><li>The Knowledge Graph can be reused with new dataset, ideally providing real-time insights to target users in future models</li></ul>
Low Explainability	<ul style="list-style-type: none"><li>Visual cues make it easier for users to understand and explain the Knowledge Graph</li></ul>
